Executive Summary

GlowMart generated **₦652.6M** in revenue from **15,000 transactions**, selling over **45,226 units** between 2022 and 2024. The business achieved a **27.64% Gross Profit Margin**, producing **₦180.4M** in gross profit, indicating healthy overall performance.

Recommendations

1: Rebalance Inventory Allocation Based on Demand

The analysis shows that customer demand is not evenly distributed across cities, yet inventory is currently allocated equally at 20% per location. Port Harcourt contributes **21.6% of total revenue** and **21.5% of total units sold**, creating the largest positive allocation gap (**+1.60%**). Abuja and Kano also generate slightly higher demand than their current allocation. GlowMart should increase inventory allocation to Port Harcourt, Abuja, and Kano while reducing allocation to Lagos and Ibadan, where demand falls below current stock levels.

2: Prioritize High Performing Brands During Replenishment

BrandA generated approximately **₦200M** in revenue, outperforming all other brands and contributing nearly one third of total company sales. This suggests that BrandA products should receive priority during inventory replenishment and procurement planning.

3: Focus Growth Efforts on High-Value Customer Segments

Customers aged **46+ generated ₦174M**, making them the most valuable customer segment in the business. Marketing campaigns, loyalty programs, and product promotions should be designed with this demographic in mind while maintaining engagement across younger age groups.

4: Strengthen Sales and Inventory Collaboration

The analysis indicates that neither the Sales nor Inventory team was entirely wrong. Inventory allocation was distributed equally across cities, but actual customer demand varied significantly by location. GlowMart should implement a monthly Sales and Inventory Planning process where inventory allocation decisions are based on revenue trends, units sold, and customer demand data rather than fixed allocation assumptions.
